**PRACTIVET**  
Solutions Specialists

# Sales Special !!! Today ONLY!

- Buy 5 cases of NeedleFree devices
  - Admin lines
  - Tports
  - Vial adaptors
- RECEIVE a **FREE** Infusion Pump
  - Multiple infusion modes
  - Infusion log
  - Adjustable alarm parameters
  - In clinic calibration

# VEDCO OmniSet

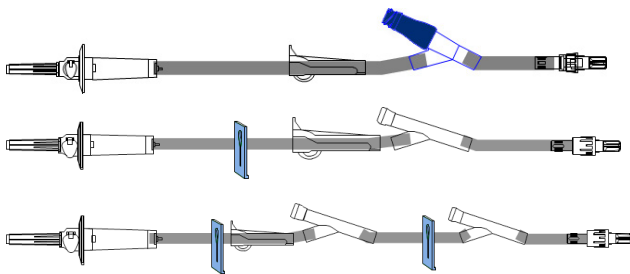

Uncompromising Quality, Exceptional Value

Vedco OmniSet IV administration sets and extensions offer the exact same quality as the leading brands, but at substantial savings to your veterinary practice. Each can be utilized as Luer Lock or Luer Slip, whichever is preferred. OmniSets are compatible with most Abbott, Baxter and Heska pumps and incorporate the most popular features:

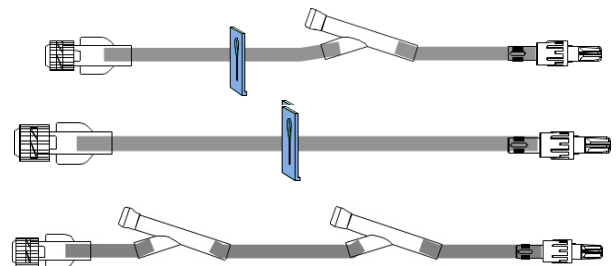

Accurate Flow Rates  
Kink-Resistant Tubing

Longer 7" T-Port Extension Sets  
Large Injection Site Surface Area

# MicroClave® Neutral Displacement Connector

Needle-free technology designed to reduce the risk of bacterial contamination and improve patient outcomes by providing a safe and effective microbial barrier.

The MicroClave's neutral displacement straight fluid path design, split-septum and minimal deadspace work together to help minimize blood reflux into the tip of the catheter upon connection or disconnection of the luer. Not only does MicroClave provide enhanced patient safety through innovative technology, but it has also been proven to provide an effective microbial barrier against bacteria transfer and contamination.

## Simple Safe Secure

The MicroClave can be used on all peripheral, arterial, and central venous catheters for the administration of IV fluids or medications, and can be used with blood products. Because it is a neutral displacement device, MicroClave does not require a change in clinical practice or technique and may help you address recent concerns raised by the FDA regarding the safety of positive displacement connectors.

## A New True Needle-Free No-Cap Protocol for Technicians to Disconnect IV Sets From Patients for Exercise!

The addition of the MicroClave to an administration set combined with the MicroClave or MicroClave t-ports gives you a completely closed system when the patient is disconnected from the IV administration set for exercise. Simply attach the male end of the IV line into the MicroClave site when not in use. Now you can get the benefits of a needle-free system for the same price (or less) as competitors' standard sets!

Scan this QR code to view the MicroClave and No-Cap protocol video.
